

The X-LINK™ SYSTEM

by
Ten X Technology, Inc.

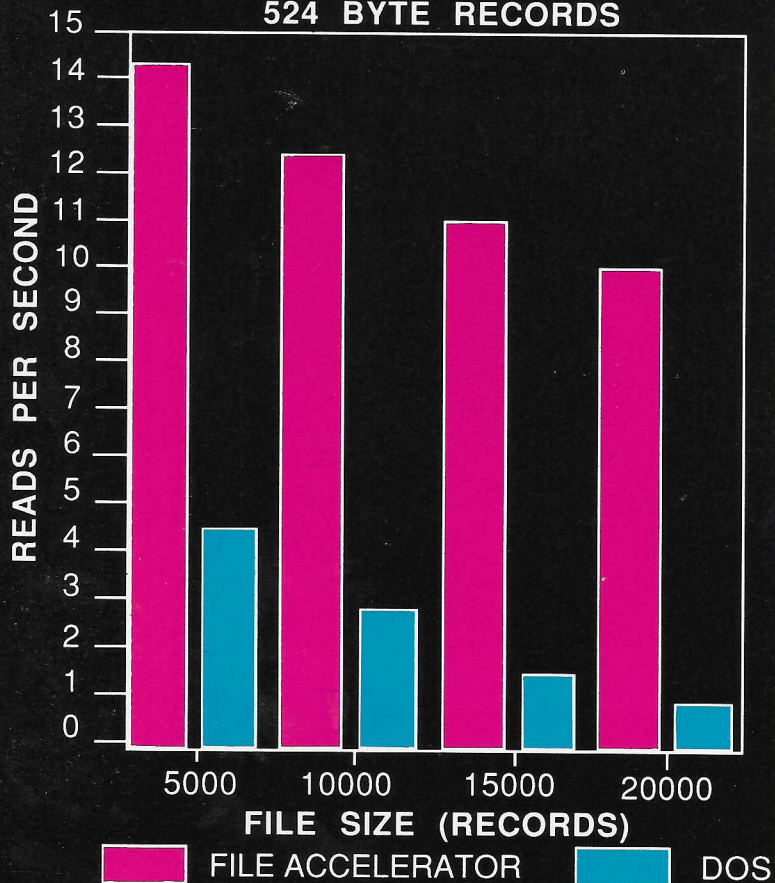

- ...A perfect match of performance and expansion for DOS and DX10 applications
- ...Accelerated file I/O processing and ...
- ...Ability to create a PC network

The X-LINK™

RANDOM KIF READ SPEED

524 BYTE RECORDS

X-LINK File Accelerator

- Accelerated I/O file processing
- Optimizes disk seeking and file caching through the use of multiple concurrent processors and sophisticated software
- Eliminates the major bottleneck in most PC systems with the same techniques used by expensive mainframes and minicomputers
- Provides the ability to expand, share common datafiles and devices as the need for intra/inter departmental processing grows

X-LINK Network Interface Unit

- Piggy back board with built-in expansion port mounted on the X-LINK File Accelerator
- Provides communication from the host to remote AT units
- Programmable software selectable features
- State-of-the-art technology with RS-485 for twisted pair connection

SYSTEM

X-LINK Remote Interface Unit

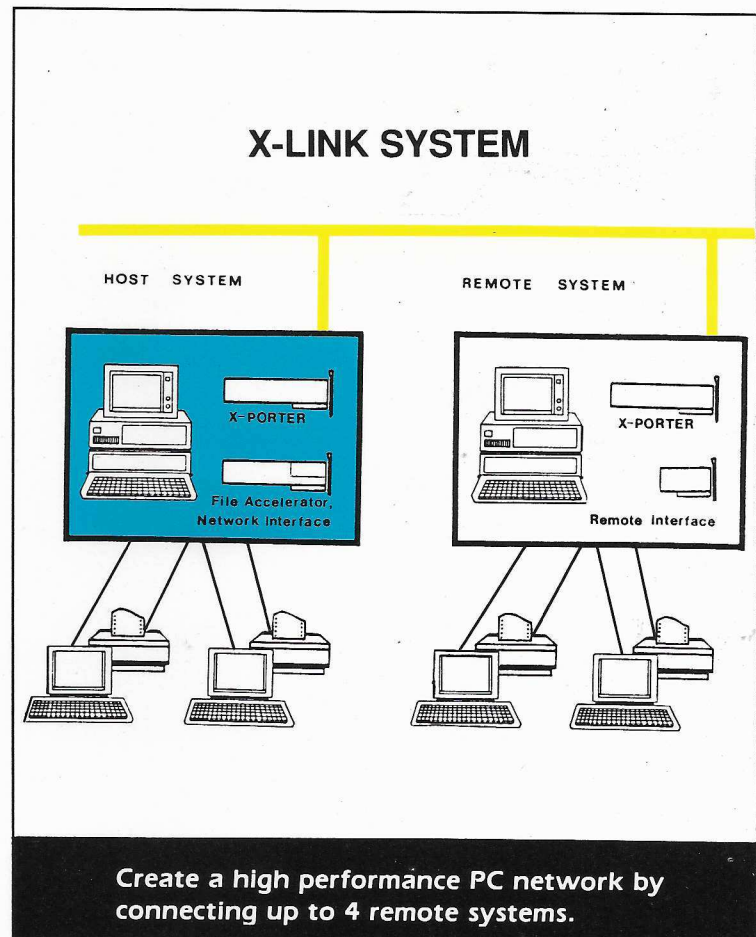

- Half size card that installs in the remote AT unit
- Communicates to the host via the X-LINK Network Interface Unit
- Uses RS-485 technology

Product Commitment

Ten X Technology: our experience as a leader in the development of performance enhancement products assures you of field-tested reliability and product quality.

Ten X's advanced engineering and responsive service provides you with the highest quality products and service in the industry. Each Ten X manufactured product is backed by a one-year hardware warranty and a 30 Day Money-Back Guarantee.

Performance Solutions are Ten X's Business . . . X-LINK System: our latest example of continuing commitment to product excellence.
