

X-PORTER™

for the IBM Personal System/2

Want to run your DX10 applications on the new IBM Personal System/2? Now you can with the X-PORTER for PS/2 systems! It's easy, it's fast and it doesn't require modification, relinking or recompiling of your software.

Compatibility

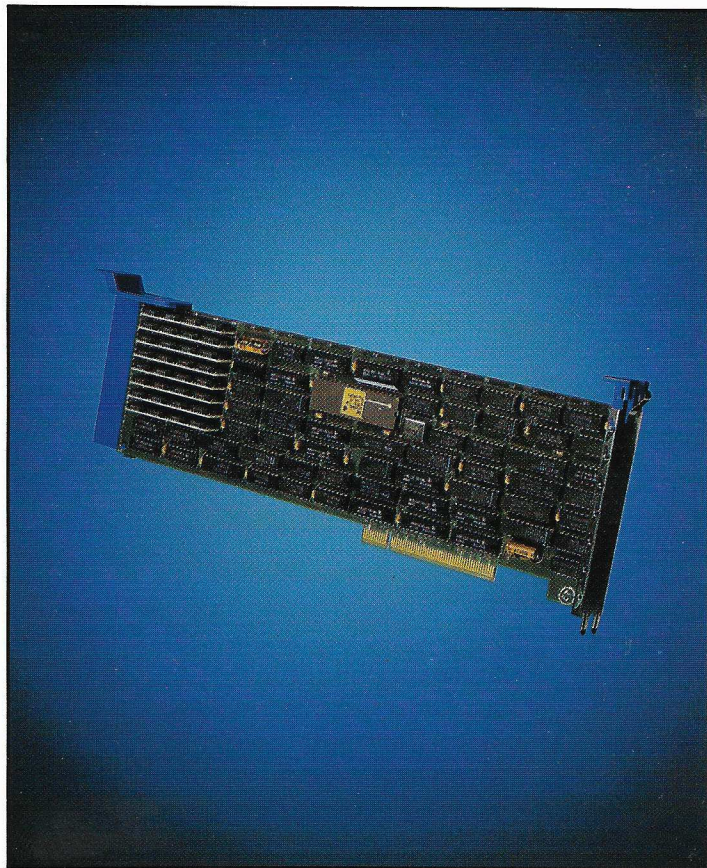

The multi-user X-PORTER for the PS/2 runs virtually all programs written in BASIC, COBOL, Assembler, etc. for the DX10 Operating System on the PS/2 Model 50, 60 and 80. Your applications are transferred to the PS/2 via a communication package like 3780 or 931 emulation.

Time and Money Saving Advantages

X-PORTER for the PS/2 saves you time and money. You don't have to spend the financial and technical resources associated with a "software conversion". There is nothing new to learn because your applications run just like they did on your Business System. Maintain only one software library for both the PS/2 and Business System environments.

Other X-PORTER Features include:

- 1 to 3 user capability
- Use of associated printers when attached to TI 931-compatible terminals
- Easy to use menu driven system generation utility for the sysgen process
- Support of foreground and background tasks running concurrently
- Record-locking and file-locking implementation to insure data integrity and security

Support and Service

- Nationwide toll-free HOTLINE
- Annual support subscription plan with unlimited HOTLINE support and software updates at no additional cost
- Customer Support hours are 8 a.m. to 5 p.m. (CST), Monday thru Friday
- Nationwide field service by qualified third party vendors
- One year hardware warranty
- 30 Day Money-Back Guarantee
